FireFly
SINGLE SEAT ULTRALIGHT

Fuselage tube support. Fold as shown and glue to tube at spot A. Glue in tube at spots B.

Use wire for landing gear. Paper clip should work.

Fuselage boom tube. Fold into a prism shape. Must not be twisted.

Color your plane before printing. Don’t forget a pilot! It won’t fly without some weight up front.

Roll the front third of the wing with a pencil to give an airfoil shape.

Overlap sides here. Tape gear and boom tube support here before taping sides.
